PROFESSIONAL SUMMARY

Software Engineer with 4+ years of technology experience specializing in AI-driven automation and enterprise data systems (Oracle, SQL Server). At Liberty Networks I build intelligent workflows at telecom scale; on my own infrastructure I operate 6 products in production end-to-end. I don't hand off problems at the deploy line.

Python · FastAPI · LLM APIs · Oracle · SQL Server · PostgreSQL · AWS · Docker · nginx · CI/CD · n8n · React · Astro · Linux

EXPERIENCE

Software Engineer
2024 – Present

Liberty Networks — Panama City

- Built AI-based ticket classification that cut manual processing time by 60% across support operations.
- Develop and automate workflows over Oracle & SQL Server at telecom scale (ETL, reporting, integrations).
- Python, SQL and AWS integrations for enterprise systems (REST APIs, schedulers, monitoring).

Founder & Solo Engineer
2023 – Present

Self-managed production platform (VPS) — 6 live products

- Run aizyla.com: automated publishing pipeline (RSS → CTR scoring → SEO/schema → verified deploy). Diagnosed and recovered a Google Helpful Content penalty: 8→68 impressions/day (+750%), PageSpeed 98.
- Built nadiweb.tech: 20-tool utility ecosystem (Astro + React islands, Gemini-powered CV assistant, client-side media processing).
- Operate tdsolutionspa.com: agency frontend + n8n/PostgreSQL invoicing & coupon backend (Docker) with real external clients and PagueloFácil payments.
- Designed a multi-AI operations protocol (persistent shared context, per-project logs, live status tooling) — agentic engineering in production since 2025.
- Operate the full stack myself: nginx multi-site, Docker, PostgreSQL, hardened SSH, fail2ban, automated off-site backups, cron pipelines — 247+ days uptime.

General Manager → Technology Lead
2021 – 2024

Retail operations — Panama

- Led operations and drove digitalization: inventory systems, e-commerce and payment integrations.
- Business-ownership mindset applied to engineering: priorities, cost and user impact first.

SELECTED PROJECTS

TriageAI — open-source AI ticket triage. Published TriageAI (open source): FastAPI ticket-triage service, two-tier engine (LLM with deterministic fallback), 15 tests, CI matrix, Docker.

EDUCATION & LANGUAGES

B.Sc. Information Technologies — Universidad Tecnológica de Panamá

Cybersecurity Engineering (in progress) — IMMUNE Technology Institute

English C1 — Ontario Tech University program · EF SET 74
